Network Medical Absorption Products

The **Eyeteq** range is a complete line of sponge products used for the management of fluids during ophthalmic procedures. PVA and cellulose sponge products are used during cataract and other refractive surgeries. Processes have been developed for the production of specialised products such as the LASIK programme. The latest designs of eye spears give a cleaner, wider, and more absorbent eye spear which is ideal for all ophthalmic procedures. Several speciality PVA products are also available for the care and cleaning of delicate micro instruments which will assist to prolong the life of these expensive instruments. All products are manufactured under the strictest management systems and Network are committed to ongoing product development.

Code:	Description	Packaging	Qty / Box

Aaron Medical Cauteries

Aaron manufactures four different cauteries specifically designed for ophthalmology. These patented Aaron RAM™ cauteries have an impressive four-year shelf-life and are quite simply the best cauteries ever made.

High temperature cauteries are popular for many types of procedures including, pinpoint hemostasis, and controlling diffuse bleeders, vasectomies, and sculpting woven grafts.

Item Number	Description	Qty / Box
DFV-210	AA00 Sterile Ophthalmic Cautery 1300° F – Low Temperature	10

Graether Pupil Expander From Eaglevision

Ideal during surgical management of:

- Intra-operation Floppy Iris Syndrome (IFIS)
- Small pupils

The single-handed insertion instrument has been redesigned for easy controlled release and accurate placement of the silicone ring.

Item Number	Description	Qty / Box
1550	Graether 2000 Pupil Expander inc. sterile ring for dilation, sterile	1

Single-Use Ophthalmic Instruments

Pre-packed Disposable Procedure Sets

With current medico-legal issues and outcomes analysis documentation, the treatment of high-risk patients can prove challenging. DFV can assist with fully disposable instruments and custom-made disposable instrument sets for all ophthalmic and oculo-plastics procedures. A cost effective solution to all sterilisation issues and the expense of replacing reusable standard instruments, disposable instruments can allow a hospital or day surgery to provide surgery for high-risk patients without compromising existing equipment.
